**National Editor
Christo Munnik**

So begin 2019 se skouseisoen alweer, ongelooflik sou ek sê maar nee dit is die waarheid. Kwa-Zulu-Natal se streekskou inskrywings het alweer gesluit en word daar weer gewerk om die skou die moeite werd te maak vir die paar lede wat ingeskryf het. As ek die ding so bekyk word elke skou net kleiner met die aantal vertoners en duiwe wat ingeskryf word. Lede skakel en vra kan ek nog môre inskryf ek weet ek is laat, wat doen ek, jammer ek kan nie jou inskrywing aanvaar nie en dan verloor jy duiwe op skou en dalk weer dieselfde lid wat aanstaande jaar nie kom skou nie of aanvaar jy inskrywings vir solank as wat jy kan uithou net om nog duiwe en vertoners op skou te hê. Laasgenoemde was nog altyd my keuse want ek weet met die program wat ons gebruik kan jy lede help wat vergeet het en wat aan die slaap geraak het.

Ek weet daar is wel 'n afsny datum na die sluitingsdatum maar ons hou maar uit tot dan wat sal ons anders maak. Ek weet dit is nie lekker om duiwe rond en bont in die skousaal te hê van dieselfde rasse nie maar dit het ook nog niemand skade gedoen nie glo vir my.

Ek is nou regtig nie besig om vertoners aan te moedig om laat in te skryf nie maar 'n mens kan maar hier en daar grasie gee. Dit is tog maar ter uitbreiding van ons duiwe "hobby" nie waar nie.

Ek het die volgende stukkie van 'n baie goeie vriend ontvang en ek plaas dit hier vir almal wat wel die Sierduif lees se aandag.

"Die een ding waarvan ons weet is dat ons eendag sal doodgaan, sterf, aan beweeg of huistoe gaan hoe jy dit ookal wil noem, Hoe jy sal sterf dit weet jy nie ook nie wanneer dit sal gebeur nie, Die vraag is egter het jy gelewe? Het jy asem gehaal? Sonder druk van verpligtinge, asem gehaal sonder om alewig vergifnis te vra?.

Ek lees in die Bybel die gelykenis van die arm man

***"There is only one way to avoid criticism: do nothing, say nothing, and be nothing."* – Aristotle**

Lasarus wat vol swere voor die ryk man se poorte gelê en wag het vir krummels van sy tafel, terwyl die honde sy sere lek. Die ryk man het nie 'n naam in die bybel nie, Lasarus was 'n kind van die Here, die rykman nie, so sy naam was nie belangrik genoeg om op te teken nie.

Altwee sterf en Lasarus, Koningskind is in die Hemel, die rykman in die hel, hy vra so ons weet hulle praat daar of Lasarus nie net met iets vir hom 'n slukkie water kan gee nie, ook vra hy of daar nie iemand is wat sy vyf broers kan gaan waarsku om hulle te sê om hulle lewens te verander nie.

Vraag is, sal hulle Lasarus glo?

Leef ook maar 'n bietjie, wees partykeer 'n bietjie laf, wees lief vir ander, nie net jou eie mense nie, eet partykeer iets soets, of die kolonel se hoender, maar moenie ophou om te BID nie, nie soggens en saans nie, maar leef soos jy BID. God ken jou, Hy het jou hare op jou kop getel, Hy maak storms op die see stil, Hy loop op die water, sit op kerktorings sonder 'n "scaffold", maak dowes hoor en blindes sien.

Jy mag nou wel dink aan al die ander mooi stories oor hoe om te lewe en te glo, stories van die "universe" wat vir jou sorg, of baie ander stories, maar as die pad in twee vurk en daar lê twee mense een wat dood is en een wat lewe, vir wie sal jy die pad kan vra? My God het die dood oorwin, Hy lewe!!!!"

Dit laat 'n mens dink oor hoe ek en jy lewe, ek sê geniet die lewe terwyl jy kan, eet wat jy wil terwyl jy kan want daar sal 'n dag kom wat jy dit nie meer kan doen nie. Geniet die lewe.

Vriende van my en Cora, Barry en Mada Baxter is nou in Australië om hulle tweede dogter in een jaar by te staan en ook te begrawe, albei is oorlede aan kanker op jong ouderdomme, een verlede jaar in Augustus en die een verlede week en Vrydag. My vraag is hoe simpatiseer mens met daardie twee mense en wat hou hulle aan die gang? Ons weet nie, maar wat ons wel weet is dat hulle Geloof hulle staande hou.

Geniet die skoue wat nou begin en ek hoop dat die beste duiwe sal wen en dat almal wenners sal hê iewers in die land.

**The Pigeon Part 1
From The Pigeon
Submitted by Simon
Jordaan**

Characteristics and Attributes:

- Pigeons can fly at altitudes of 6000 feet or more
- Pigeons can fly at average speeds of up to 77.6 mph but have been recorded flying at 92.5 mph
- Pigeons can fly between 600 and 700 miles in a single day, with the longest recorded flight in the 19th century taking 55 days between Africa and England and covering 7000 miles
- Pigeons are thought to navigate by sensing the earth's magnetic field and using the sun for direction. Other theories include the use of roads and even low frequency seismic waves to find their way home
- Pigeons (and all the columbidae family) drink by sucking water and using their beaks like straws. Most birds sip water and then throw their head back to swallow
- Pigeons, like humans, can see in colour, but unlike humans they can also see ultraviolet light, a part of the spectrum that humans cannot see. As a result, pigeons are often used in search and rescue missions at sea because of this unique sense combined with excellent all-round vision
- Pigeons have been found to pass the 'mirror test', the ability to recognise its own reflection in a mirror. The pigeon is one of only 6 species, and the only non-mammal, to have this ability
- Pigeons are highly intelligent and can recognise all 26 letters of the alphabet as well as being able to conceptualise. Pigeons can differentiate between photographs and even two different human beings in a single photograph.

Domestication of the Rock Dove:

Early wall painting of man with dove

The first mention of the domestication of the rock dove was found in Mesopotamian cuneiform tablets (pictographical writing on clay tablets) dating back over 5000 years. However, it is likely that rock doves were domesticated by Neolithic man as far back as 10,000 years ago in and around the alluvial plains of the Tigris and Euphrates. It was at this time that Neolithic man was starting to cultivate cereal crops and domesticate animals for food. In pre-history it is likely that rock doves lived alongside man in caves and on cliff faces.

Images of pigeons were first found on the reconstructed façade of an excavated temple dedicated to the goddess Ninhursag (Queen of Heaven and Earth) at Al'Ubaid in Sumeria in 3000 BC. Many more clay images of pigeons have been found during excavations of sites in Iraq and Crete dating back to 3000 BC. During the excavation of an

Die Sierduif

Egyptian tomb in 3000 BC, the bones of pigeons were found in what is thought to have been the remains of a funerary meal. Although images of the pigeon have been found dating as far back as 3000 BC, it is not clear what role the pigeon played in these ancient civilisations and to what extent the bird was domesticated.

Later, in 1100 BC, King Rameses III sacrificed 57,000 pigeons to the god Ammon at Thebes, confirming that the pigeon was well on the way to being domesticated not only for food but also for religious purposes. Mention of pigeon sacrifices can also be found in both the Old Testament and the New Testament.

The pigeon is probably best known for its ability to return 'home' from long distances and has been used extensively by man for this purpose. The earliest reference to the pigeon being used to carry messages dates back to 2500 BC and the tradition has continued throughout history. The Romans and ancient Greeks used the pigeon extensively for carrying messages and the first sophisticated messaging service was established in Syria and Persia in the 12th century AD, with messages being carried by pigeons from city to city.

Carrier Pigeons - WW1

Later, in the 19th century, the pigeon was used for commercial purposes, carrying messages for financial institutions and news agencies in Europe and even providing an airmail service in New Zealand. In the 20th century, pigeons were used extensively

in both Great Wars to carry messages, and as a result of their bravery and heroism, tens of thousands of human lives were saved. The last messaging service using pigeons was disbanded in 2006 by the police force in the city of Orrisa, India.

Ancient Egyptian pigeon house 44 AD

Dedicated pigeon houses, or dovecotes, were believed to have existed in very early times in southern Palestine and later in Egypt in 44 BC.

However, a detailed and well-preserved Roman mosaic dating from 200 BC shows a dovecote with a thatched roof in which there are numerous flight holes with pigeons perching both on the roof and flying above it. This confirms that the pigeon was being bred in dedicated facilities over 2200 years ago. The Sicilian historian Diadorous, writing about the period circa 300 BC, also described a mud building with a reed thatched roof that was used to house domesticated pigeons, further confirming that organised domestication had been established in this period.

The dovecote has played an essential role in the domestication of the pigeon throughout history, with facilities ranging from extremely crude early examples in the form of basic clay pots through to highly ornate detached buildings housing many

thousands of birds in the 17th, 18th and 19th centuries.

Dovecote, Dieppe, France

Pigeons were housed and bred within these structures for food, their excrement (which was used as fertiliser and as an ingredient for gunpowder), sport and as messengers. The tradition of housing pigeons in man-made structures continued until the 20th century and is described in more detail in the Dovecotes article.

The pigeon was domesticated not only for its ability to return home and as a source of food and by-products, but also for the purposes of sport. Man has found many sporting uses for the pigeon throughout history, with the earliest known example being the sport of Triganieri. It is unclear when

this ancient sport first started, but the early Greeks and Romans are believed to have participated in it. The sport involves each participant using captive pigeons, released from several pigeon lofts or dovecotes at the same time, and to lure as many birds as possible away from adjoining lofts using specially trained pigeons. The captured birds were either killed or held for ransom. This sport has continued through the centuries and is still played today. In the Turkish city of Urfa the sport involves over 500 flocks in a single event.

Pigeon Cage Trap

Other sporting uses for the pigeon included the use of falconry, known as the 'Sport of Kings', where both domesticated and wild pigeons were killed for sport. The sport is believed to have started prior to the 10th century AD. At the end of the 17th century, with the advent of the shotgun, falconry dwindled in popularity, but a new, more deadly sport took its place – pigeon shooting. In the Middle East, domesticated pigeons are still used today as bait for falconers.

Organised pigeon shoots started in the 18th century where huge numbers of domesticated birds were released and shot at point-blank range. Incredibly, the sport continues today in the USA where huge numbers of feral pigeons are cage-trapped by unscrupulous pest controllers and netted by illegal gangs and then sold to shooting clubs. The birds are then released in front of shooters, many with semi-automatic weapons, and shot at point-blank

range.

Pigeon Transporter

Probably the most common use for the domesticated pigeon today is pigeon racing, a sport that is popular in virtually every country in the world. It is not known when pigeon racing for sport first started, probably in very early history, but pigeon racing as we know it today first started in Belgium in 1850. The sport grew in popularity and peaked in 1960, when there were 170,000 pigeon fanciers in the UK alone. Today the sport is in decline, but pigeons that are considered to be good breeding stock can exchange hands for as much as £65,000.

**The Pigeon Part 2
From The Pigeon
Submitted by Simon
Jordaan**

The Pigeon as an Icon and Symbol:

Since its domestication many thousands of years ago, the pigeon has been revered by many religions, including Hindu, Islam, Christian and Sikh. Although Neolithic man (circa 8500 BC onwards) undoubtedly domesticated the rock dove, there is little indication that the bird was used for anything but food.

Ancient Persian Dovecote

The first historical indication of there being religious significance associated with the domesticated pigeon was in 3000 BC during excavations of temples and tombs in Egypt, Mesopotamia (modern Iraq) and Crete. Images of pigeons were first found in an excavated temple dedicated to the goddess Ninhursag (Queen of Heaven and Earth) at Al'Ubaid in Sumeria. On the reconstructed façade of the temple, a limestone frieze was found showing a row of sitting pigeons. Another discovery, found in Copper/Bronze Age tombs (3rd/4th millennium BC) excavated on the island of Cyprus, revealed large number of clay bowls, some decorated with doves. These closely resemble similar clay bowls found on the island of Crete. The bowls are thought to have been used for sacrificial worship or have some other religious significance.

Excavations of tombs dating back to 1600 BC at Mycenae in southern Greece revealed two ornaments that depict doves. One is of a goddess holding a dove in either hand, and another perched on her head, and the other depicts an altar upon which doves are perched. Another excavation in Canaan (modern day Israel and Lebanon) dating back to 1200 BC found a terracotta relief depicting a Dove-goddess holding a dove in either hand. Further examples have been excavated from Canaanite temples dating between to 1100-1300 BC, one showing a model of a shrine shaped roughly like a dovecote with pigeons sitting within the dovecote holes. These examples not only confirm the religious significance of the dove in early history but also confirm that the dove was bred in dedicated dovecote facilities for religious worship. The pigeon was used as a sacrifice in early history, with King Rameses III, King of Egypt, sacrificing 57,000 pigeons to the god Ammon at Thebes in 1100 BC.

Die wonder van Pomelopit Ekstrak
 deur Johan Nel
 Geneem uit 'n Sierduif
 van 2007

Pomelopit ekstrak word beskou as 'n natuurlike "wondermiddel" en is volgens Derick Streak van Diamant Stoetery, Kimberley wêreldwyd bewys in klinieke en die algemene publiek as 'n veilige en effektiewe natuurlike produk om te gebruik.

Dit word reeds suksesvol by mens en dier aangewend om baie tipes inwendige en uitwendige infeksies soos parasiete, viruses, bakterie en swamme teen te werk. Nie net genees en verhoed dit nie, maar is ook 'n produk wat ontsmet, reinig, opbou en die immuun sisteem versterk. Die grootste voordeel is die breë spektrum effek wat dit bied.

Hoe vlakke van Vit. C en E is teenwoordig en plaas ook suurstof in die liggaam vir beter funksionering van die brein, spierweefsel en werk melksuur teë.

Dit alkaliseer die bloed en ligaamsvloeistowwe (verhoog Ph) Dit kan in baie lae dosisse en gereeld toegedien word sonder enige nadelige nuwe effekte en kan saam met enige vitamine of medisyne gegee word.

Grapefruit Seed Extract, made by BOSS animal Health (The South African Pigeon Company) is effective against more than 800 bacterial and viral organisms, 100 strains of fungus and a large number of singlecell and multicell parasites, including Canker. It's an powerful bacterial, antiviral and antifungal agent. Dosage: For the Racing guys - 5 drops per liter water daily during the racing and breeding season. For us I think it's more like during the off season (except for breeding season) to use 10 drops per liter water for 48 hours every 10 days. Pomelopit ekstrak is by verskeie duiwewinkels beskikbaar en vir 'n 30ml botteltjie sal jy in die omgewing van R100 betaal. (Dit was nou natuurlik die prys in Upington)

Natuurlike produkte is van onskatbare waarde en persoonlik dink ek dis meer die regte pad om te volg as die gedurige behandeling met antibiotika en chemiese middels om siektes hok te slaan.

Good article on Apple Cider Vinegar
 Rob Lombaard
 Taken from March / April 2008 Fancy Pigeon

When my Mother commented that she could not find an article in "THE FANCY PIGEON" that I had submitted I realized that it was time to "pull finger" as if the other few contributors to our beloved magazine go into depression as I have, our faithful editor will suffer serious stress attacks.

As most of us have heard about the use of apple cider vinegar in drinking water not many know the reason and facts of, WHY? The following article I received from an Australian Brunner chat group

that myself and a circle of friends have set up on the Internet.

The wonders of apple cider vinegar:

Apple cider vinegar is a natural substance that strengthens the immune system, as it is an excellent source of trace and micro elements. Apple cider vinegar is an ideal source of organic acid. Organic acids help digestion and the breaking down of food intake, and thus prevent the development of illnesses caused by undigested food. It is widely known that acidity prevents the spread of coli bacteria and salmonellas. These pathogens like a gently alkaline environment in which they can really start to proliferate. Apple cider vinegar mixed in water prevents salmonella from spreading in the waterer. Its acidic effect continues to restrict pathogens, even in the pigeon's intestines.

Many have found that in hot weather pigeons' rate of breathing can increase, dramatically if it is very hot, and pigeons breathe rapidly with their beaks open. On such occasions the increased exchange

of air causes more carbon dioxide to leave the blood than normal. This leads to acid deficiency, and so the blood becomes increasingly alkaline (breathing alkalosis). Initially this process generates bad disposition, dizziness, then nausea, and, if it becomes more extreme, death. In hot weather we pine for soft drinks with lemon and carbon dioxide in order to compensate for the acid deficiency. If at such times we give our pigeons water with apple cider vinegar, we can save their lives.

In prolonged heat we can achieve even more with a little apple cider vinegar than this. For in addition to the changing pH of the blood, potentially fatal processes are taking place in the digestive system. Heat is a powerful stressor, but is bad for digestion in and of itself, as the vessels in the skin, lungs, etc. expand, while the vessels supplying the digestive system contract. Thus in hot weather consumption of food declines, meaning that good intestinal bacteria do not have adequate nutrition, and so the acid they produce also decreases.

Meanwhile the alkalinity of the blood grows, which is life-threatening. Simply put, the body attempts to compensate for this by taking acid away from the digestive system, further increasing its alkalinity. As

the heat stress has already reduced the resistance of the digestive system, all these factors mean that conditions are ideal for the fast proliferation of salmonellas lurking in the intestines. Thus in hot weather there is every chance that a paratyphoid epidemic will flare up. In most cases, all this can be prevented by a simple acidification of drinking water with apple cider vinegar.

Like anything else, apple cider vinegar can be overdosed. In too great a quantity it can even damage good intestinal bacteria. The high quantity of acid absorbs calcium (lime) and removes it from the system, which results in motor and reproductive problems. So overdoses of apple vinegar should be avoided. The dose for 5% apple cider vinegar is 4-8ml per litre of drinking water, 1-3 times a week. If we administer it more regularly, e.g. in prolonged hot weather, we should choose a lower level of concentration. In addition, we can use apple cider vinegar for the disinfection of objects, e.g. waterers, or more precisely for the subsequent acidification of a sterilized set of trays. This prevents the spread of salmonellas in the outside world. We should use it for this purpose to wash the floor of the loft.
